Micro800® Starter Packs

Discover the capabilities of the Allen-Bradley® Micro800 PLC family

Allen-Bradley

## Benefits of starter packs for the Micro800 PLC family

The starter packs for the Micro800 PLC family are a great way to try out a micro PLC solution without making high up-front investments.

Each starter pack contains the hardware and software you will need to familiarize yourself with the Micro800 controllers and their applications.

Your starter pack will contain the following:

- Micro800 controller
- Micro800 24V DC power supply
- Micro800 accessories
- Input simulator
- USB programming cable
- Connected Components Workbench™ software DVD (Standard Edition)

Starter pack for first-time users of Micro800 PLC

The Allen-Bradley Micro800 PLC family, together with the Connected Components Workbench software, sets a new global standard for convenience and ease of use, while providing just the right control capability to match your micro application requirements. With a wide range of network interface devices, finding the right controller to fit your communication needs is easy.

Micro800 controllers are designed for standalone machines. These economical small-size PLCs are available in different form factors that are based on the number of I/O points being embedded in the base, with a range of features that are intended to address different requirements. The Micro800 family shares programming environment, accessories and plug-ins that allow machine builders to personalize the controller for specific capabilities.

If you have been keen to test the capabilities of Micro800 controller in your application, this starter pack provides you the hardware and software to experiment.
