Designing an Interlocking System

Plant and Machinery Interlocking

Primary hazards

(Power isolation)

3 Port spool valve

Solenoid key release unit coupled to temperature or pressure switch sensors

Auxiliary hazards

Required when more than

one hazard element needs

isolation or more than one exposure/access point

Key control element

Guarded area access

Bolt lock for sliding guards

Ancillary functions

Rotary key switch

Chain interlock for large or poorly aligned sliding, hinge and lift off guards

To gain access to the danger

Consider removal of all power providing kinetic energy to the system i.e., electrical motors, pressurized air, etc.

Comments Consider factors such as run down and environmental factors such as hazardous (explosive) atmospheres. Use EEX isolator and timed delay units where necessary.

Consider if the hazard is removed

immediately i.e.,
a) Machine run on due to momentum.

grounding and

Bolt lock off device for

capacitive discharge

- b) Pressurization of hydraulic or pneumatic systems. Stored energy such as capacitance or
- static electricity.
- Temperature, either hot or cold, creating a hazard.

interlocking. Comments

Consider sequentially interlocking all primary sources of hazard so all are eliminated. In turn, releasing a single key to input in key control element. Additional monitoring, isolation or control functions such as switches or solenoid locks may be incorporated at this stage to eliminate other elements.

Consider 2 key versions to provide
a) Personnel key exchange types to prevent operator lock-in (whole body access applications only).

b) Lock out devices requiring 2 keys in from different sources to enable controlled access.

Required when additional functions such as programming/machine resetting are necessary.

Comments Two key versions required at access points to facilitate this feature.

Key Interlock Switches

The Prosafe Advantage

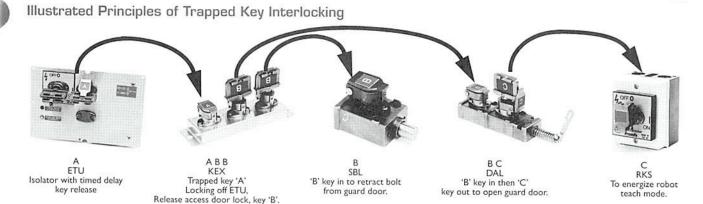

Stainless steel construction.

Allen-Bradley

Guard marter

Sequence of Operation

- The ETU isolator has two keys. One is a non removable key. The
 other key (a 'A' coded key) can be removed after a timed duration,
 which is set by a potentiometer inside the ETU isolator. Turn the
 non removable key to turn the hazardous machine motion off
 and start the timer. When the time expires, the Key Free LED
 turns ON. Remove the 'A' key.
- Insert the 'A' key into the Key Exchange Unit (KEX) and turn it 90°.
- Turn one of the 'B' keys 90° and remove it from the KEX. This
 traps the 'A' key in the KEX and prevents the restarting of the
 machine.
- Insert the 'B' key into the Single-key Bolt Lock (SBL) and turn it 90° to gain partial body access to the machine.

- 5. Turn the second 'B' key 90° and remove it from the KEX. Removal of this key also traps the 'A' key in the KEX and prevents the restarting of the machine.
- Insert the 'B' key into the Dual-key Access Lock (DAL) and turn it 90°.
- Turn the 'C' key 90° and remove the 'C' key. Rotate the access handle to allow full body entry into the hazard zone.
- Take the 'C' key into the hazard zone, insert it into the rotary key switch (RKS) and turn it 90° to send a signal to the machine control system, to allow the machine to operate in a slow or teach mode.
- 9. Reverse the process to return the machine to full operational mode.

Bill of Materials

Item	Quantity	Description	Catalogue Number
1	1	Single Key Time Delayed with an B Primary Key	440T-MSTUEII0A
2	1	Key Exchange Unit, A Primary Key, Two B Secondary Keys Trapped (included)	440T-MKEXEII0A0B0B
3		Single Bolt Lock, B Primary Key	440T-MSBLE100B
4	1	Dual Access Lock, B Primary Key, C Secondary Key Trapped (included)	440T-MDALE100B0C
5		Rotary Key Switch, C Primary Code Barrel	440T-MRKSE100C
6		A Key	440T-AKEYE100A

Note: Primary keys must be ordered separately, when not provided for by a previous sequential trapped key.

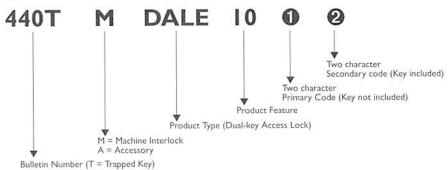

In the example above, only one primary key must be ordered separately. The remaining primary keys are provided by a previous sequential secondary (trapped) key.

Code Selection

Ordering Prosafe trapped key products requires codes to be included in the catalogue number.

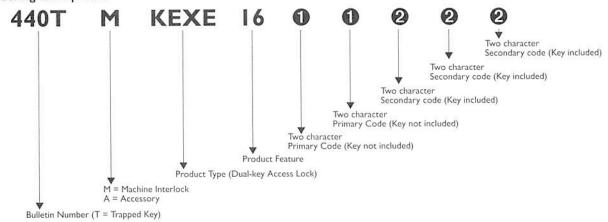

- · The codes are added to the end of the catalogue number.
- · Each code must be two characters in length.
- · Single letter codes must be preceded by a 0 (zero).
- The first code(s) is the primary code and the last code(s), if necessary, are the secondary code(s).
- · Primary codes do not include the key. The key must be ordered separately or must come from a previous operation.
- · Secondary codes come complete with a key, as the key is trapped in the code barrel.
- · Use the table on page 5-7 to select and track codes.

Ordering Example 1:

Order catalogue number 440TMDALE100A0B to get a Dual key Access Lock with an "A" primary code and a "B" secondary code, with a "B" key included.

Ordering Example #2:

Order catalogue number 440TMKEXE160A0B0C0C0C to get a key exchange unit with "A" and "B" primary codes and three "C" secondary codes. The "A "and "B" keys are not included. The three "C" keys, which are trapped in the secondary code barrels, are included.

The Prosafe Advantage

Stainless steel construction.

5-Prosafe™ Trapped Key Interlock Switches

Key Coding

Below is an example reference guide that is useful in selecting and tracking codes. Start down the 0A column as the lower codes (typically 0A to ZA) are stocked. The chart continues on to ZZ. Note that there only 25 letters used—Q is not used.

Codes are ordered with upper case letters. Labels with two letter codes will show the first letter in upper case and the second letter in lower case.

	Code	Application & Date	Code	Application & Date	Code	Appli & Da
	0A	ulalet 172	Aa		Ab

Description

The rotary switches are used for electrical isolation of machinery to enable safe access. Once the power has been turned off, the key can then be withdrawn and used in the next sequence of operation such as unlocking an access hatch or allowing valves to be operated.

The rotary switch can either be mounted in a panel or purchased in an IP65 enclosure. The rotary switch is available with 4 poles, either 4 N.O. or 2 N.C. and 2 N.O. The 100A 4 N.O. switch has 3 contacts rated at 100A and 1 contact rated at 20A.

Features

- · 316L stainless steel keys
- Direct drive operation—positively opens contacts
- IP 65 rated enclosure—water and dust resistant
- Stainless steel dust cap included
- · Up to 100A isolation
- 4 N.O. or 2 N.O. and 2 N.C. contacts
- · Replaceable code barrel assembly
