Rockwell Automation recognizes that some of the terms that are currently used in our industry and in this publication are not in alignment with the movement toward inclusive language in technology. We are proactively collaborating with industry peers to find alternatives to such terms and making changes to our products and content. Please excuse the use of such terms in our content while we implement these changes.

The FLEX 5000® I/O architecture provides a wide range of input and output modules to span many applications, from high-speed digital to process control. The architecture uses Producer/Consumer technology that allows input information and output status to be shared among multiple Logix 5000® controllers.

FLEX 5000 I/O systems are used as remote I/O modules with Logix 5000 controllers such as ControlLogix® 5580, CompactLogix™ 5380, and CompactLogix 5480. The modules are configured with the Studio 5000 Logix Designer® application.

The I/O modules require a terminal base (TB) assembly to connect field-side wiring. TBs consist of a mounting base (MB) and removable terminal block (RTB). TBs are not available for order individually. You must order MBs and RTBs separately to assemble the TBs required for your system.

TBs are mounted onto a zinc-plated chromate-passivated steel DIN rail such as the Allen-Bradley® 199-DR1; 46277-4; EN 60715 – 35 x 7.5 mm (1.38 x 0.30 in.). You must also install DIN rail end anchors (Allen-Bradley 1492-EAJ35 or 1492-EAHJ35) at both ends of your system for vibration or shock environments. The FLEX 5000 I/O system can be oriented in the following positions.

FLEX 5000 I/O System Mounting Orientations

Maintain spacing from enclosure walls, wireways, and adjacent equipment. Allow 25.4 mm (1.00 in.) of space on all sides for adequate ventilation.

FLEX 5000 I/O modules support removal and insertion under power (RIUP), however you can leave only up to four consecutive empty slots.

5094-IRT8S and 5094-IRT8SXT Safety Analog 8-channel Thermocouple/RTD Input Modules

This figure shows a wiring diagram for the 5094-IRT8S and 5094-IRT8SXT safety modules. You must connect a 24V DC power source to the left SA+/- terminals to provide field-side power.

- IMPORTANT**
- To ensure proper operation and high immunity to electrical noise, always use Belden 8761 (shielded, twisted pair) or equivalent wire with shield connected to earth near 5094 module.
 - The 5094-STB shield bar accessory is required to wire the shields for the 5094-IRT8S modules using the 5094-TB3IT or 5094-TB3ITS terminal base assemblies. Catalog number 5094-STB is available separately.

These examples apply to the 5094-IRT8S and 5094-IRT8SXT analog input modules when used in RTD mode.

5094-IJ2IS and 5094-IJ2ISXT Safety 2-channel Isolated Frequency Input Modules

These figures show wiring diagrams for the 5094-IJ2IS and 5094-IJ2ISXT safety modules. You must connect a 24V DC power source to the left SA+/- terminals to provide field-side power.

IMPORTANT

- To ensure proper operation and high immunity to electrical noise, always use Belden 8761 (shielded, twisted pair) or equivalent wire with shield connected to earth near 5094 module.
- The 5094-STB shield bar accessory is required to wire the shields for the 5094-IJ2IS and 5094-IJ2ISXT modules using the 5094-TB3I or 5094-TB3IS terminal base assemblies. Catalog number 5094-STB is available separately.

This figure shows a wiring diagram for the 5094-IJ2IS and 5094-IJ2ISXT modules connected to a magnetic pickup sensor.

5094-IJ2IS and 5094-IJ2ISXT Wiring Diagram – Magnetic Pickup Sensor

Diagram illustrating the wiring of a Vortex Flowmeter to a PLC. The PLC has three IEC Type 3 modules: two Magnetic modules (AO 0-1, AO 4-5, AI 8-9, AI 12-13) and one IEC Type 3 module (COMO 16-17, COMO 20-21, COM1 24-25, COM1 28-29). The Vortex Flowmeter is connected to the PLC via a shielded cable. The cable has four conductors: a red wire connected to the Vortex Flowmeter's positive terminal, a blue wire connected to the Vortex Flowmeter's negative terminal, a green wire connected to the PLC's COM1 24-25 terminal, and a black wire connected to the PLC's COM1 28-29 terminal. The shield bar is connected to the PLC's COM1 24-25 terminal.

Terminal Base Assemblies

The I/O modules require a terminal base (TB) assembly to connect field-side wiring. TBs consist of a mounting base (MB) and removable terminal block (RTB). TBs are not available for order individually. You must order MBs and RTBs separately to assemble the TBs required for your system. RTBs with “S” (for example, RTB3TS) are spring-type. RTBs without “S” (for example, RTB3T) are screw-type.
