The PanelView™ 5510 terminals are operator interface devices that monitor and control devices attached to ControlLogix® L7 or L8 controllers, and CompactLogix™ L1, L2, or L3 controllers over an EtherNet/IP™ network. Animated graphic and text displays provide a view to operators into the operating state of a machine or process. Operators interact with the control system by using the touch screen or keypad of the terminal.

The PanelView 5510 terminals include these features and capabilities:

- Tightly integrated control and design environment allows information to be shared between the PanelView 5510 terminal and the Logix platforms.
- The Studio 5000® environment provides one point of access for the Studio 5000 View Designer® and Studio 5000 Logix Designer® applications.⁽¹⁾
- Connection up to four ControlLogix L7 or L8 controllers, or CompactLogix L1, L2, or L3 controllers.⁽²⁾
- Supports a maximum of 100 user-defined screens.
- Supports a maximum of 4,000 Logix-based alarms.⁽¹⁾
- Ethernet communication that supports Device Level Ring (DLR), linear, or star network topologies.
- High-speed human machine interface (HMI) button control and easily configured navigation menu.

- (1) PanelView 5510 firmware can support up to 4,000 Logix-based alarms if you use Studio 5000 View Designer application version 5 and Studio 5000 Logix Designer application version 32 or higher. Earlier versions of the Studio 5000 View Designer or Studio 5000 Logix Designer applications can support up to 1,000 Logix-based alarms. For more information about the Logix-based alarms, see footnote 2.
- (2) A combination of up to four of the following Logix controller models: ControlLogix L7 or L8 controller, or CompactLogix L1, L2, or L3 controller with revision 31 firmware or later.
NOTE: If the PanelView 5510 terminal supports up to four Logix controllers, then each controller can use a mix (instruction-based and tag-based) of alarms up to 1,000 alarms per controller. If a single Logix controller is supported, then up to 4,000 alarms can be used but only 1,000 of them can be instruction-based.

Studio 5000 Environment

Use the Studio 5000 environment to create HMI applications for the PanelView 5510 terminal.

This environment includes these major components:

- **Studio 5000 View Designer** – the application where you create and design projects for a specific PanelView 5500 terminal and deploy that project to the terminal.

A project that is created for one terminal size can be converted for other terminals across the entire 5500 platform, regardless of size.

- **Studio 5000 Logix Designer** – the application that is used to develop control logic for a CompactLogix or ControlLogix controller and deploy that logic to the terminal.

In the Studio 5000 environment, you can create an application for any PanelView 5510 terminal and reuse that same application across the entire platform.
